

AURELIA — FINE JEWELLERY

Web Development Internship – Task 2

Project Report

Project Type: Responsive Jewellery E-Commerce Website

Internship: Synent Technologies – Web Development Internship

Candidate: Varsha Shekar

AURELIA is a premium responsive jewellery website designed to provide an elegant online browsing and shopping experience with collections, product customization, wishlist and shopping bag functionality.

1. Introduction

AURELIA — Fine Jewellery is a client-side e-commerce style website developed as part of Task 2 of the Synent Technologies Web Development Internship. The website presents jewellery collections through a luxury visual interface and includes interactive shopping features.

2. Objective

- To design a modern and responsive fine jewellery website.
- To present jewellery collections and individual products clearly.
- To provide product customization options such as metal and stone selection.
- To implement wishlist and shopping bag functionality.
- To provide a checkout and order confirmation flow.
- To create a responsive interface suitable for desktop and mobile devices.

3. Technologies Used

Technology	Purpose
HTML5	Structure and content of the website pages
CSS3	Luxury visual design, layout, animations and responsive styling
JavaScript	Interactive navigation, product options, cart, wishlist and checkout behaviour
LocalStorage	Client-side persistence for shopping bag and wishlist data

4. Main Features

- Luxury jewellery landing page with premium visual presentation.
- Collections organized into rings, necklaces, earrings and bracelets.
- Product detail pages with metal and stone customization options.
- Quantity controls and Add to Shopping Bag functionality.
- Wishlist functionality for saving products.
- Shopping bag displaying selected products, quantities and totals.
- Checkout and order confirmation flow.
- Search, account and journal-related interface sections.
- Responsive design for desktop and mobile screens.
- LocalStorage support for client-side cart and wishlist persistence.

5. Implementation / Methodology

The website was implemented using separate HTML structures for the major sections, CSS for the dark luxury theme, typography, product layouts and responsive behaviour, and JavaScript for interactive functionality. Product selections can be customized, items can be added to the shopping bag or wishlist, and the checkout flow leads to an order confirmation screen.

6. Project Structure

Pages: Home, Collections, Product Details, The Atelier, Journal, Account, Wishlist, Shopping Bag and Checkout

HTML: Website page structure

CSS: Visual styling and responsive layout

JavaScript: Interactive shopping and UI functionality

7. Result

The AURELIA website was successfully developed as a functional responsive jewellery e-commerce interface. The screenshots demonstrate the home page, collections, product customization, shopping bag and order confirmation stages of the user experience.

8. Conclusion

This project provided practical experience in responsive front-end development and interactive e-commerce interface design. It demonstrated the use of HTML, CSS and JavaScript to build a complete browsing and shopping flow with client-side data persistence.

9. Project Submission

The project source code and documentation are maintained in a public GitHub repository and the website is deployed using GitHub Pages.
